

Diploma in **BUSINESS INTELLIGENCE** **Batch 4**

Your Journey to Power BI Expertise Starts Here!

 **Starting: April 2025**

 **Weekend Program**

 **Rs. 150,000/- (+5% SST)**

 **IBA City Campus**

1 Data Sources and Transformation

2 Python Programming in Power BI

3 Data Visualization & Modeling

4 Data Analysis Expressions (DAX)

Learning Outcomes

Following are the learning outcomes for the program:

- Grasp core business intelligence concepts and their impact on decision-making.
- Master data management techniques, including data warehousing and ETL.
- Apply data analysis and visualization to derive and communicate insights.
- Utilize BI tools for strategic data collection, analysis, and interpretation.
- Gain practical BI application skills in finance, marketing, and operations.
- Manage BI projects, focusing on planning, execution, and risk management.
- Collaborate effectively in multidisciplinary BI teams with strong communication.
- Stay updated on BI trends, emphasizing lifelong learning and growth.

Topics to be covered

Following are the topics to be covered in program:

- Overview of Business Intelligence and SSBI
- Introduction to Power BI and its components
- Comparison: Power BI vs. Tableau vs. QlikView
- Workflow in Power BI
- Power BI versions and building blocks
- Data modeling and its significance
- Visualizations: Charts, tables, slicers, and maps
- Custom visuals and page formatting
- KPI visuals, bookmarks, and selection pane
- Data sources and loading in Power BI
- Data transformation, cleaning, and modeling
- Python integration with Power BI
- Data relationships and cross-filtering
- Optimizing performance and data aggregations
- DAX basics: Functions, calculations, and syntax
