Advance SOC Operations and Threat Management

# Security Operations Center

## Advance SOC Operations and Threat Management

Are you ready to take your cybersecurity career to the next level and become a master's in security operations Center (SOC) operations and threat management? Our "Advanced SOC Operations and Threat Management Training" program is your gateway to expertise in safeguarding digital landscapes against evolving cyber threats.

In today's hyper-connected world, organizations face an ever-expanding array of cyber threats. This intensive and comprehensive course provides a deep dive into the heart of cybersecurity operations, where you'll develop the skills and knowledge needed to excel in the role of a SOC professional.

### Why Choose Our Training:

- **Practical Experience:** Benefit from hands-on labs, real-world simulations, and live bug-hunting exercises to hone your skills.
- **Expert Instructors:** Learn from experienced industry professionals who have defended against and analyzed cyber threats in diverse environments.
- **Certification:** Obtain a recognized certification, demonstrating your expertise in SOC operations and threat management.
- **Career Advancement:** Open doors to a wide range of cybersecurity career opportunities, from SOC analyst to security consultant or manager.

## Program Details

*Dates To Be Announced Soon*

Weekend Program

Investment: Rs. 85,000/-  
(+3% SST)

2-Months Certification

Duration:  
06:00 PM - 09:00 PM

# Prerequisites for Training Program

1. **Basic IT Skills:** Participants should have a fundamental understanding of computer systems, networks, and IT terminology.
2. **Networking Knowledge:** Familiarity with networking concepts, including protocols, IP addressing, and routing, is beneficial.
3. **Security Fundamentals:** A basic understanding of cybersecurity principles, such as confidentiality, integrity, and availability (CIA triad), is recommended.
4. **Operating System Proficiency:** Familiarity with common operating systems (e.g., Windows, Linux) and their basic administration is helpful.
5. **Cybersecurity Basics:** Knowledge of key cybersecurity concepts like malware, firewalls, and encryption provides a foundation for SOC training.
6. **IT Experience:** Some prior experience in IT roles, such as system administration or network administration, can be advantageous.

## Advance SOC Operations and Threat Management

### Learning Outcomes

Upon successful completion of this SOC training program, participants should achieve the following outcomes:

1. **Foundational Knowledge:** Develop a strong understanding of SOC operations, including the roles and responsibilities of SOC personnel at all three layers (SOC Level 1, Level 2, and Level 3).
2. **Cyber Threat Awareness:** Gain insights into the evolving threat landscape, cyberattack methodologies, and the MITRE ATT&CK Framework. Understand how attackers operate and exploit vulnerabilities.
3. **Incident Detection and Response:** Acquire practical skills in incident detection, triage, and response. Learn to recognize security incidents, assess their severity, and take appropriate actions.
4. **Security Tool Proficiency:** Familiarize themselves with essential security tools and technologies, such as SIEM solutions, EDR systems, IDS/IPS, and network security monitoring tools.
5. **Threat Intelligence Integration:** Learn to leverage threat intelligence feeds and sources to enhance incident detection and response capabilities. Understand how to apply threat intelligence principles to real-world scenarios.
6. **Endpoint Security:** Develop expertise in securing and monitoring endpoints (desktops, laptops, servers). Analyze Windows logs, processes, and services for security purposes.
7. **Compliance and Reporting:** Understand compliance frameworks and regulations (e.g., GDPR, HIPAA) and learn to create compliance reports. Gain insights into incident documentation best practices.
8. **Hands-on Experience:** Participate in hands-on labs and simulations, including a mock SOC operation. Apply learned skills to solve practical security challenges.
9. **Managerial Skills:** For managerial-level participants, develop leadership and decision-making abilities within the context of SOC operations and cybersecurity management.
