2-day workshop

TAX DECISIONS WITH DATA

Unlock the power of data to detect anomalies, forecast liabilities, and automate compliance reporting.

# Introduction

Tax Analytics: Turning Data into Fiscal Intelligence is a two-day, hands-on, case-based workshop designed to equip finance and tax professionals with the skills to harness data for smarter tax decision-making. Participants will learn how to clean, model, visualize, and interpret tax data using practical tools—without any coding required. The program focuses on real-world applications, simulations, and ready-to-use templates to help automate reporting, detect anomalies, and forecast liabilities.

Key Benefits

- Hands-on training using Excel, Power Query, and Power BI
- Practical techniques to clean and model tax-related data
- Visualizing tax trends and building interactive dashboards
- Scenario modeling to predict tax liabilities
- Simulating tax audits and compliance review processes
- Access to ready-to-use templates and analytical toolkits
- Certificate of participation upon successful completion
- No programming or technical background required

Program Details

📅 *Date:* **28th and 29th August 2025**

📅 Days :Thursday and Friday

💰 Investment: Rs. PKR 75,000 + Tax

📍 Venue: IBA City Campus

🕐 Duration: 9:30 AM – 4:30 PM

Program Outline:

- Clean and model tax data using Excel and Power Query
- Visualize tax trends and insights using Power BI
- Predict tax liabilities through scenario modeling
- Simulate tax audits and compliance processes
- Create and present tax dashboards
- Apply learning through real-life, hands-on case studies
- Receive and utilize templates and toolkits for continued application

Who Should Attend

- Finance and Tax Professionals involved in compliance, planning, and reporting
- Accountants and Auditors looking to adopt data analysis in tax-related workflows
- Chief Financial Officers seeking improved oversight and strategic insights
- Risk and Compliance Teams aiming to automate reporting and improve accuracy
- Professionals in finance roles who want to move toward data-driven tax strategies
